MRM Royalty Reconciliation

Pending changes in the software - to be completed within the next 2 days

Date	27 October 2026	**Target date**	29 October 2026 (within 2 days)
Status	Pending - not yet available in the software	**Changes**	11, listed below

This document lists, in simple words, the changes that are still pending in the MRM Royalty Reconciliation software. Each point says where the change is, what it does and why it is needed. All of them will be completed within the next 2 days.

Summary

No.	Pending change	Section	Status
1	Enquiries split into two sections: Internal and External	Home, Enquiries	**Pending**
2	Internal approval before anything goes to IPRS / PRS	Enquiries	**Pending**
3	External follow-up with IPRS / PRS: 7-day reminders, then a call	Enquiries, Home	**Pending**
4	Description of the 'My follow-ups' section	Home	**Pending**
5	Indian territory note under the greeting	Home	**Pending**
6	Weekly catalogue update from Durga, and a record of each import	Catalogue, Home	**Pending**
7	Catalogue conflicts shared with Durga every Tuesday	Catalogue - Conflicts	**Pending**
8	Review by one person, verification by a second person	Reconciliation, Activity log	**Pending**
9	Verified work to IPRS; unmatched work to Durga for verification	Reconciliation, Catalogue	**Pending**
10	Reconciliation description and one source of data per work	Reconciliation, Enquiries	**Pending**
11	Spotify 3-month and 6-month usage, mapped to the same months of revenue (IMP)	Reconciliation	**Pending**

The changes in detail

1. Enquiries split into two sections: Internal and External

PENDING

Where: Home - 'Enquiries waiting', and the Enquiries page

Today all open enquiries are shown together. They will be separated into two clear sections, so everyone can see at a glance whether an enquiry is waiting for us or for IPRS / PRS:

- **Inquiry waiting - Internal:** an enquiry that has been cleared by SK and now needs a higher authority to approve it. Only after this approval is it forwarded to IPRS.
- **Inquiries waiting - External:** the mail has been sent to IPRS / PRS and we are waiting for their reply or response.
- Each entry shows its enquiry number (for example SVF-ENQ-0004) and what it is waiting for. Clicking it opens that enquiry.

Why it matters: The team knows immediately who has to act next - someone inside the company, or IPRS / PRS.

2. Internal approval before anything goes to IPRS / PRS

PENDING

Where: Enquiries - the enquiry page

Before an enquiry is shared with IPRS / PRS, a higher authority checks the report once. This is the first step, and the buttons to copy the text and share the draft with IPRS / PRS stay switched off until it is done. There are two ways to give this approval:

- **In the software:** the person who prepared the enquiry forwards it to a senior colleague (for example SK forwards it to Devi Ma'am). She opens the enquiry, looks at both reports and confirms them - or sends them back with a comment. Notes can go back and forth between the two of them.
- **Recorded by hand:** if the senior colleague is busy, the report can be shown to her live on screen, or she can confirm it by a text message. The preparer then records how it was confirmed (live demonstration of the report, text confirmation, phone call or meeting), who confirmed it, and the date and time.
- Every step - forwarded, note, confirmed, returned - is written in the activity log with the name and the time.

Why it matters: Nothing reaches IPRS / PRS without a second, senior check, and there is a clear record of who approved it, how and when.

3. External follow-up with IPRS / PRS: 7-day reminders, then a call

PENDING

Where: Enquiries, and Home - 'Inquiries waiting - External'

Once the mail is sent to IPRS / PRS, the software follows the reply step by step:

- If there is no response within 7 days, the same mail is sent again.
- This continues every week for a 3-week cycle (3 reminders).
- On the 4th reminder the communication becomes verbal: she will connect with the CEO of IPRS for a response.
- Every reply from IPRS / PRS is recorded - what they replied and when they replied. A reply stops the reminders.

Why it matters: No enquiry is forgotten; the follow-up is regular and the escalation path is clear.

4. Description of the 'My follow-ups' section

PENDING

Where: Home - 'My follow-ups'

The section will carry this one-line description: *"Once the mail is sent out to IPRS, this section will track the movement of communication till the matter is closed."*

Why it matters: Anyone opening the dashboard understands what the section is for.

5. Indian territory note under the greeting

PENDING

Where: Home - just below "Hello, Swatantra"

The following line will be shown under the greeting: *"This calculation is taken into consideration with the understanding that the master revenue received is from the Indian territory only."* In the same way, every section of the software will get a short, simple one-line description of what it is and what it is for.

Why it matters: It states the basis of every figure clearly, so the numbers are read correctly.

6. Weekly catalogue update from Durga, and a record of each import

PENDING

Where: Catalogue - Import catalogue; Home - follow-ups

Every Tuesday a mail goes to Durga asking for the updated catalogue. When the updated catalogue is imported, the software will record:

- the name of the catalogue file;
- the date and time it was imported;
- how it was shared with us - by mail or on WhatsApp (and by whom).

Why it matters: There is always a clear history of which catalogue is in use and where it came from.

7. Catalogue conflicts shared with Durga every Tuesday

PENDING

Where: Catalogue - Conflicts

The conflicts found in the freshly updated catalogue (for example one ISRC claimed by two different works) will be shared with Durga on Tuesday, so that she can resolve them.

Why it matters: Conflicts are corrected at the source, before they affect a reconciliation.

8. Review by one person, verification by a second person

PENDING

Where: Reconciliation - review column; Activity log

When a report is reviewed, the review column will show the name of the reviewer. If it has not been reviewed yet, it will say "Not reviewed".

- If person A has done the reconciliation, person B verifies it once. The software will not let the same person do both.
- The review and the verification are recorded in the activity log with the name, date and time.

Why it matters: Every reconciliation is checked by two people, and it is clear who did what.

9. Verified work to IPRS; unmatched work to Durga for verification

PENDING

Where: Reconciliation - result tabs; Catalogue - Import catalogue

After verification the work is split into two streams:

- **Verified work** is emailed to IPRS.
- **Work for Durga verification** - the **unmatched recordings** and the **works not in the catalogue** - is mailed to Durga to verify and take the necessary steps.
- Her corrections will be available to SK when he requests the updated catalogue to import in Catalogue - Import catalogue.

Why it matters: Only checked data goes to IPRS, and catalogue gaps are fixed so that the next reconciliation is more complete.

10. Reconciliation description and one source of data per work

PENDING

Where: Reconciliation; Enquiries

The Reconciliation section will describe in one line what it does: it compares the Spotify revenue and the IPRS revenue for the same period.

It will also state: *"Each enquiry number has a distinct set of data. If a particular dataset of a specific work is covered in one report, it will not be repeated in another report for the same period. This ensures there is only a single source of data for every work."*

Why it matters: The same song and period are never claimed twice, so the figures sent to IPRS stay consistent.

11. Spotify 3-month and 6-month usage, mapped to the same months of revenue (IMP)

PENDING

Where: Reconciliation

Spotify sends usage reports for 3 months and for 6 months. The usage and the revenue will be mapped to each other month by month.

- For example, if the usage report covers 3 months, the revenue will also be filtered to the same 3 months, and the comparison is made only for those months.
- The same applies to a 6-month usage report.

Why it matters: Usage and revenue always describe the same months, so the royalty per play and the shortfall are calculated correctly. This point is marked important (IMP).

Timeline

All 11 changes above are pending and will be completed in the software within the next 2 days, by 29 October 2026.
