01 / OVERALL FLOW

From two income records to one enquiry

Goal: a publisher/label report and an evidence-backed IPRS clarification pack. The next pages expand every decision and exception route.

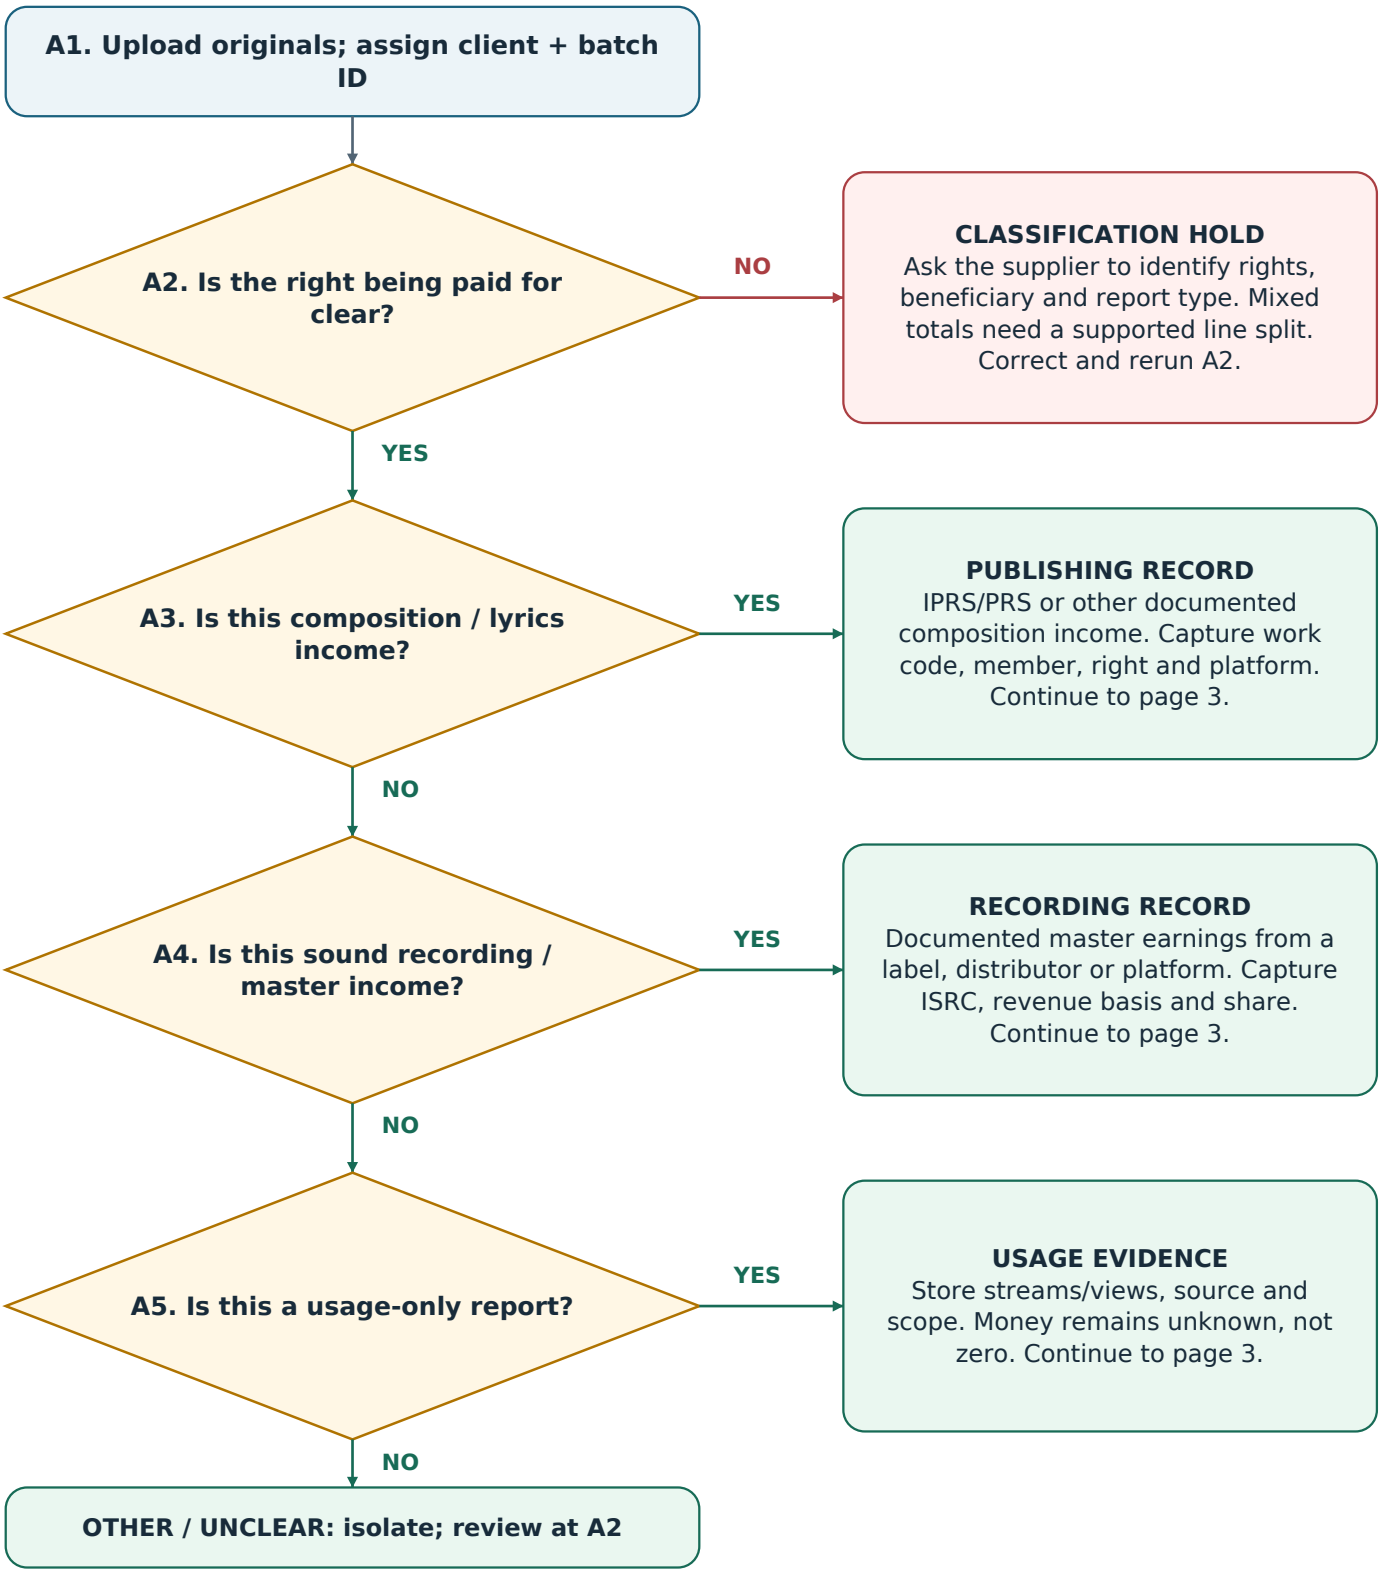

Publishing = income for the composition/lyrics. **Recording** = income for the recorded master. Classify by the right and statement line, not the platform or sender name. [S1-S2]

6% status. Retain Sherley's 6% as a configurable MRM screening assumption. No universal 6% entitlement was established by the sources reviewed. Sources and approval items: page 13.

02 / INTAKE + INCOME TYPE

Classify what each line represents

Run per client and statement line. Keep sender, payer and underlying platform as separate fields. Catalogue and registration files also feed page 4.

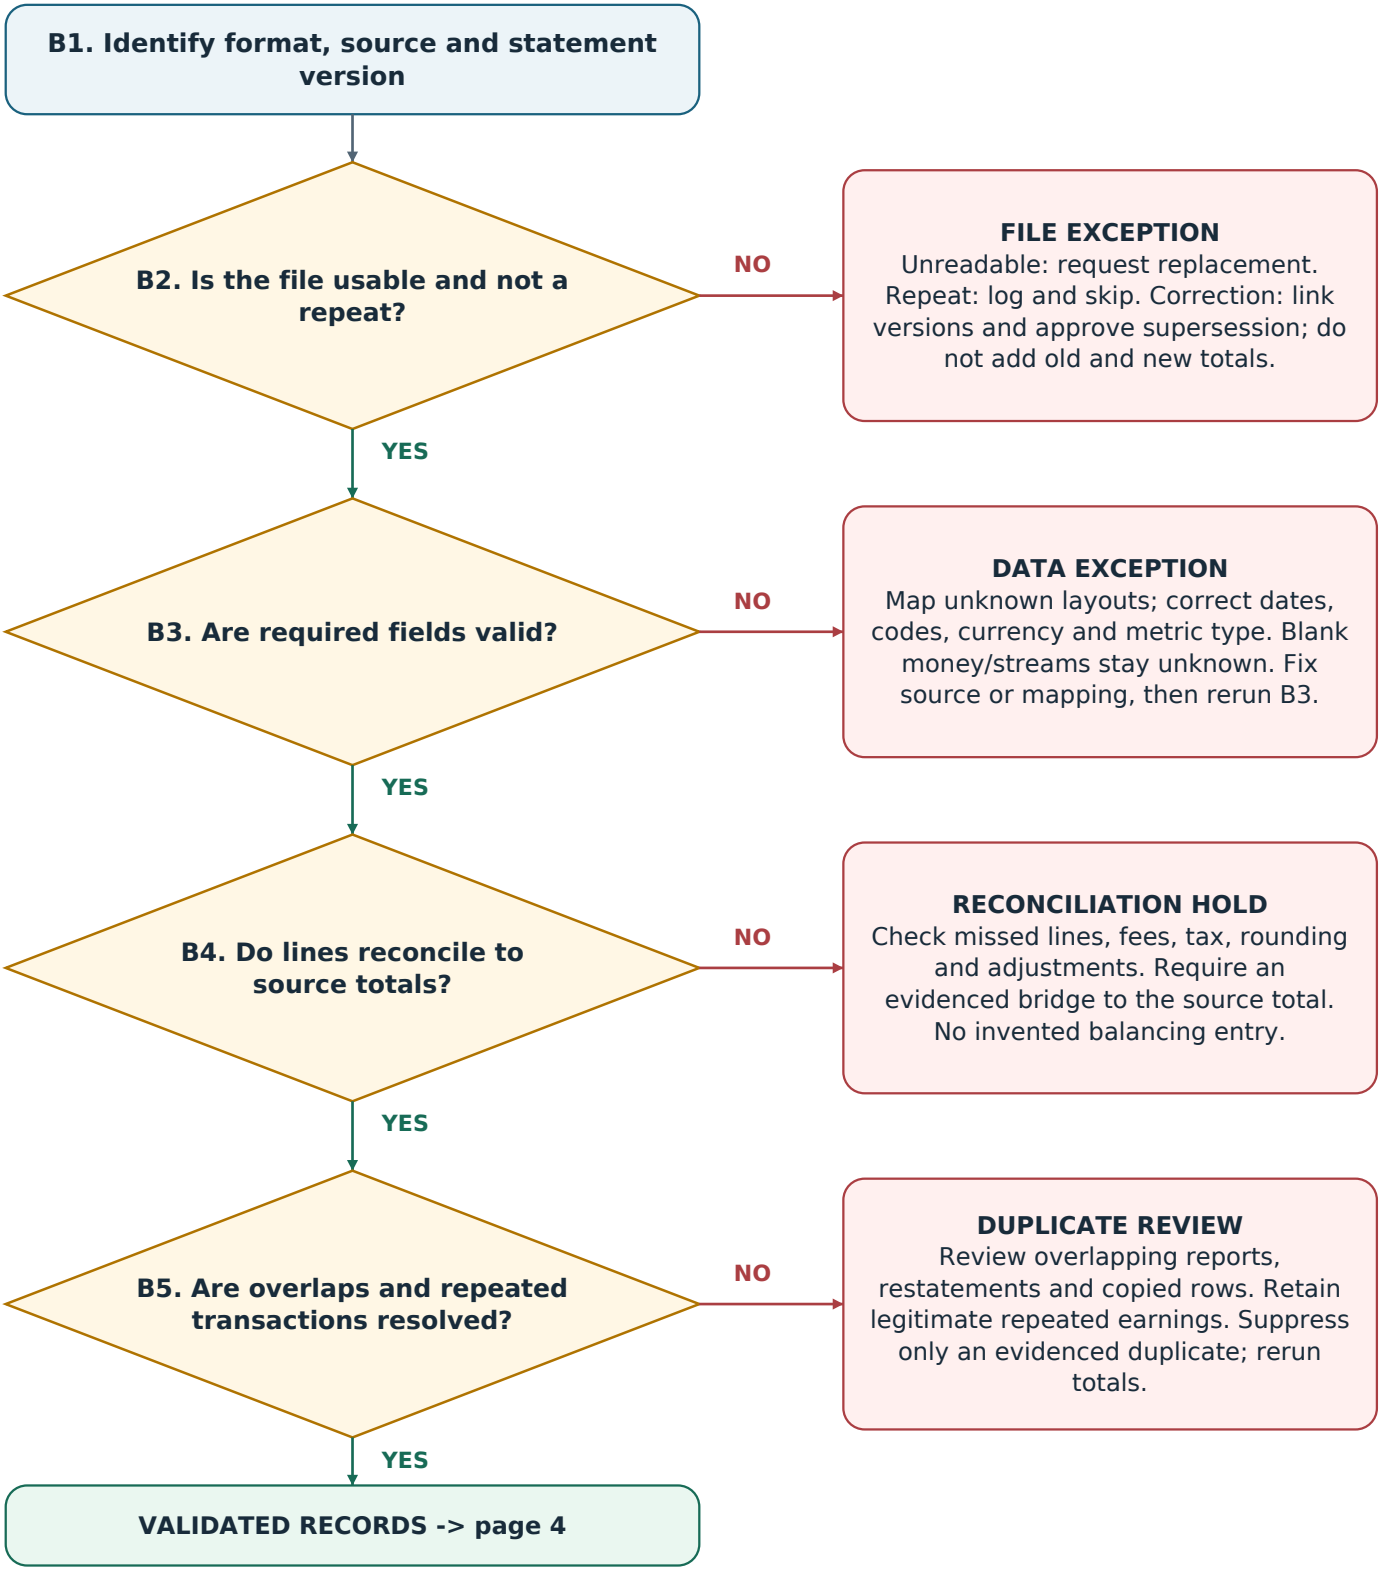

Classification rule. A DSP can generate both rights. Netflix/OTT, sync, lump sums, advances and mixed video income require their own documented category; never force them into the 6% stream comparison.

03 / IMPORT CONTROLS

Validate before figures can be used

Controls apply separately to recording, publishing and usage data. Preserve every original file and its source row reference.

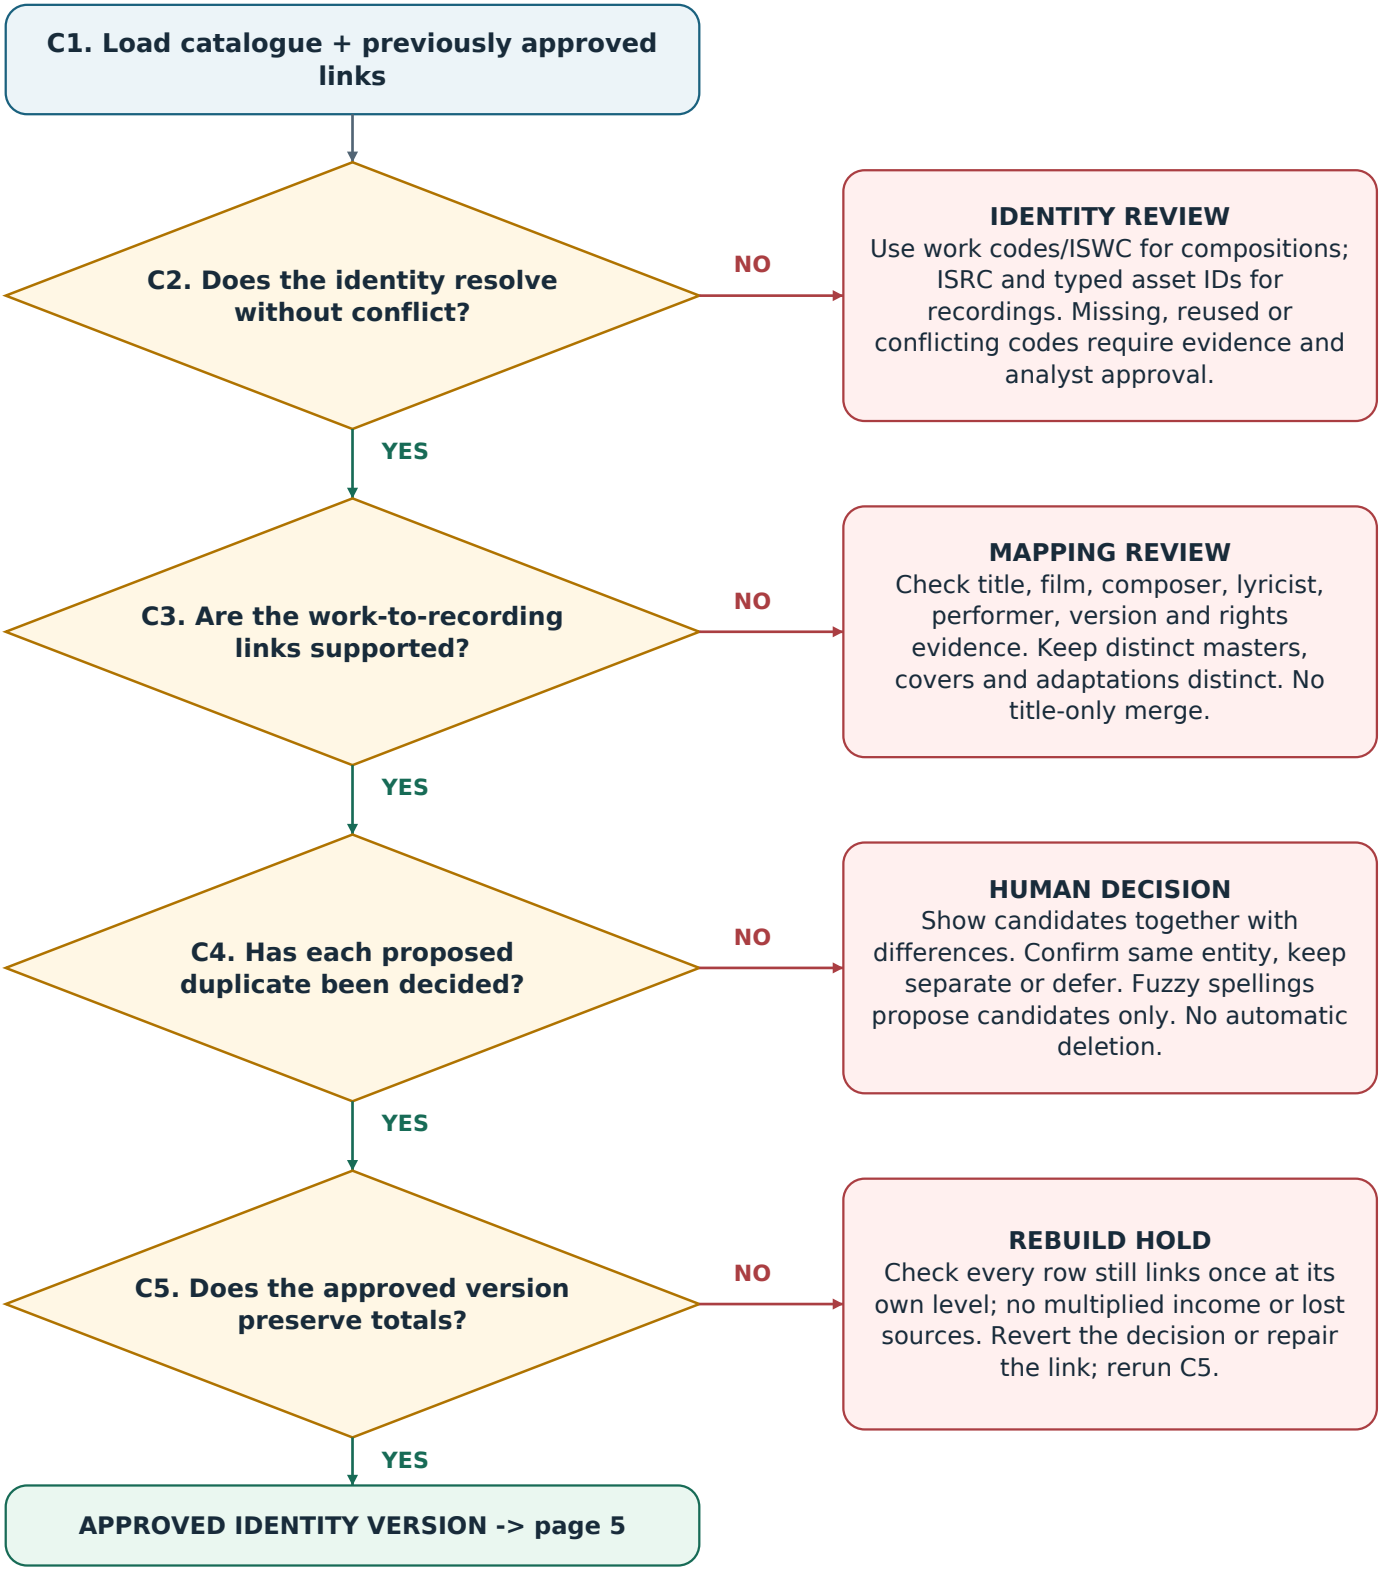

No printed total? Require an approved alternative control: supplier confirmation or independently checked source totals. Otherwise hold monetary use. Validate usage counts separately; totals are not proof of entitlement.

04 / WORK + RECORDING IDENTITIES

Map works without losing recordings

Use a composition register, a recording register and an approved link table. A composition can have several recordings; a medley can link to several works.

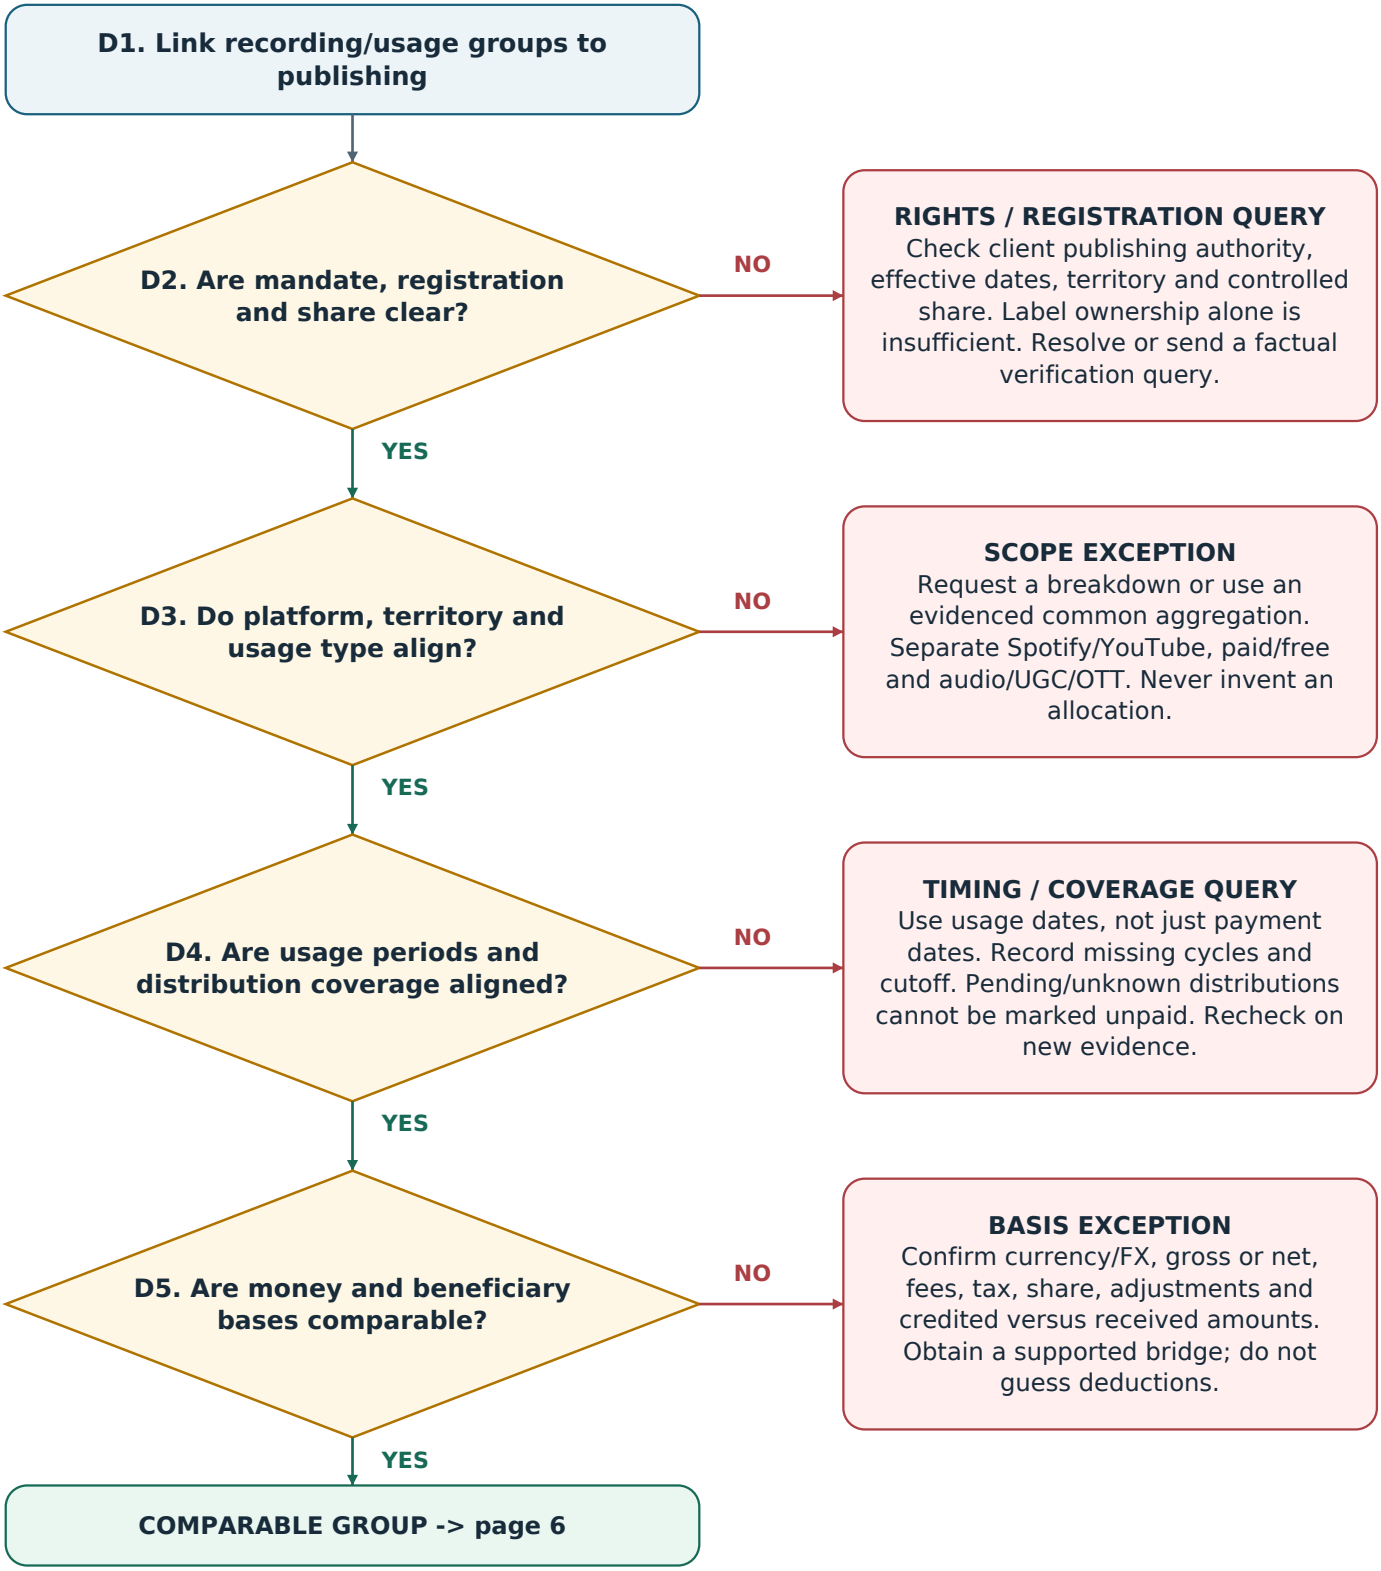

Mapping evidence. Record match basis, candidate score, reviewer, date and reason. Never treat ISRC as a work code or treat different recordings as duplicates simply because they share a composition.

05 / LIKE-FOR-LIKE COMPARISON

Compare the same scope

Build one comparison group per client/beneficiary + composition + platform + territory + usage period + service/use type + publishing-right scope.

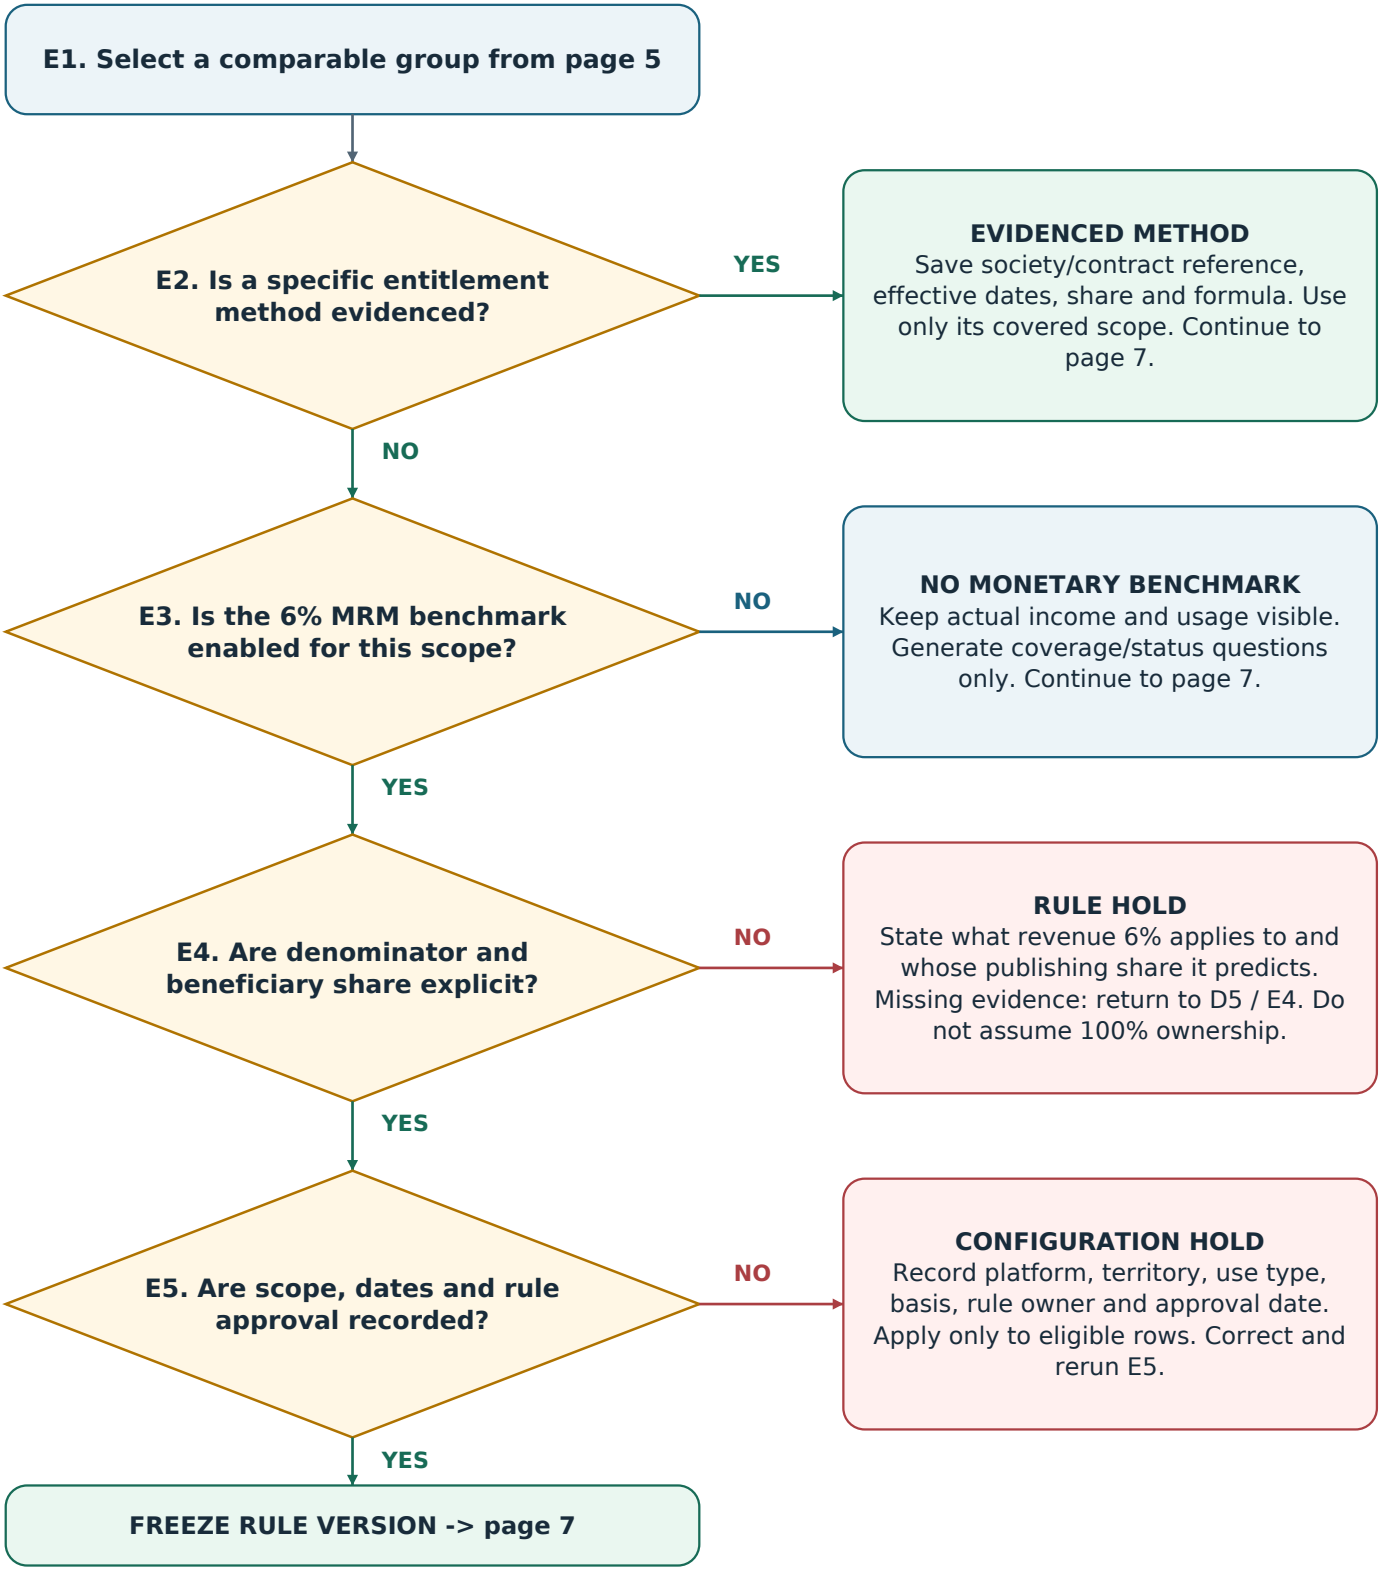

Every exception remains visible. Unmatched recording, usage or publishing rows feed the client report. Unsupported groups may support a status enquiry, but cannot contribute to a calculated monetary shortfall.

06 / RULE SELECTION

Define exactly what 6% means

The default proposal is an MRM benchmark. A society-confirmed method may replace it only for the scope and dates supported by that evidence.

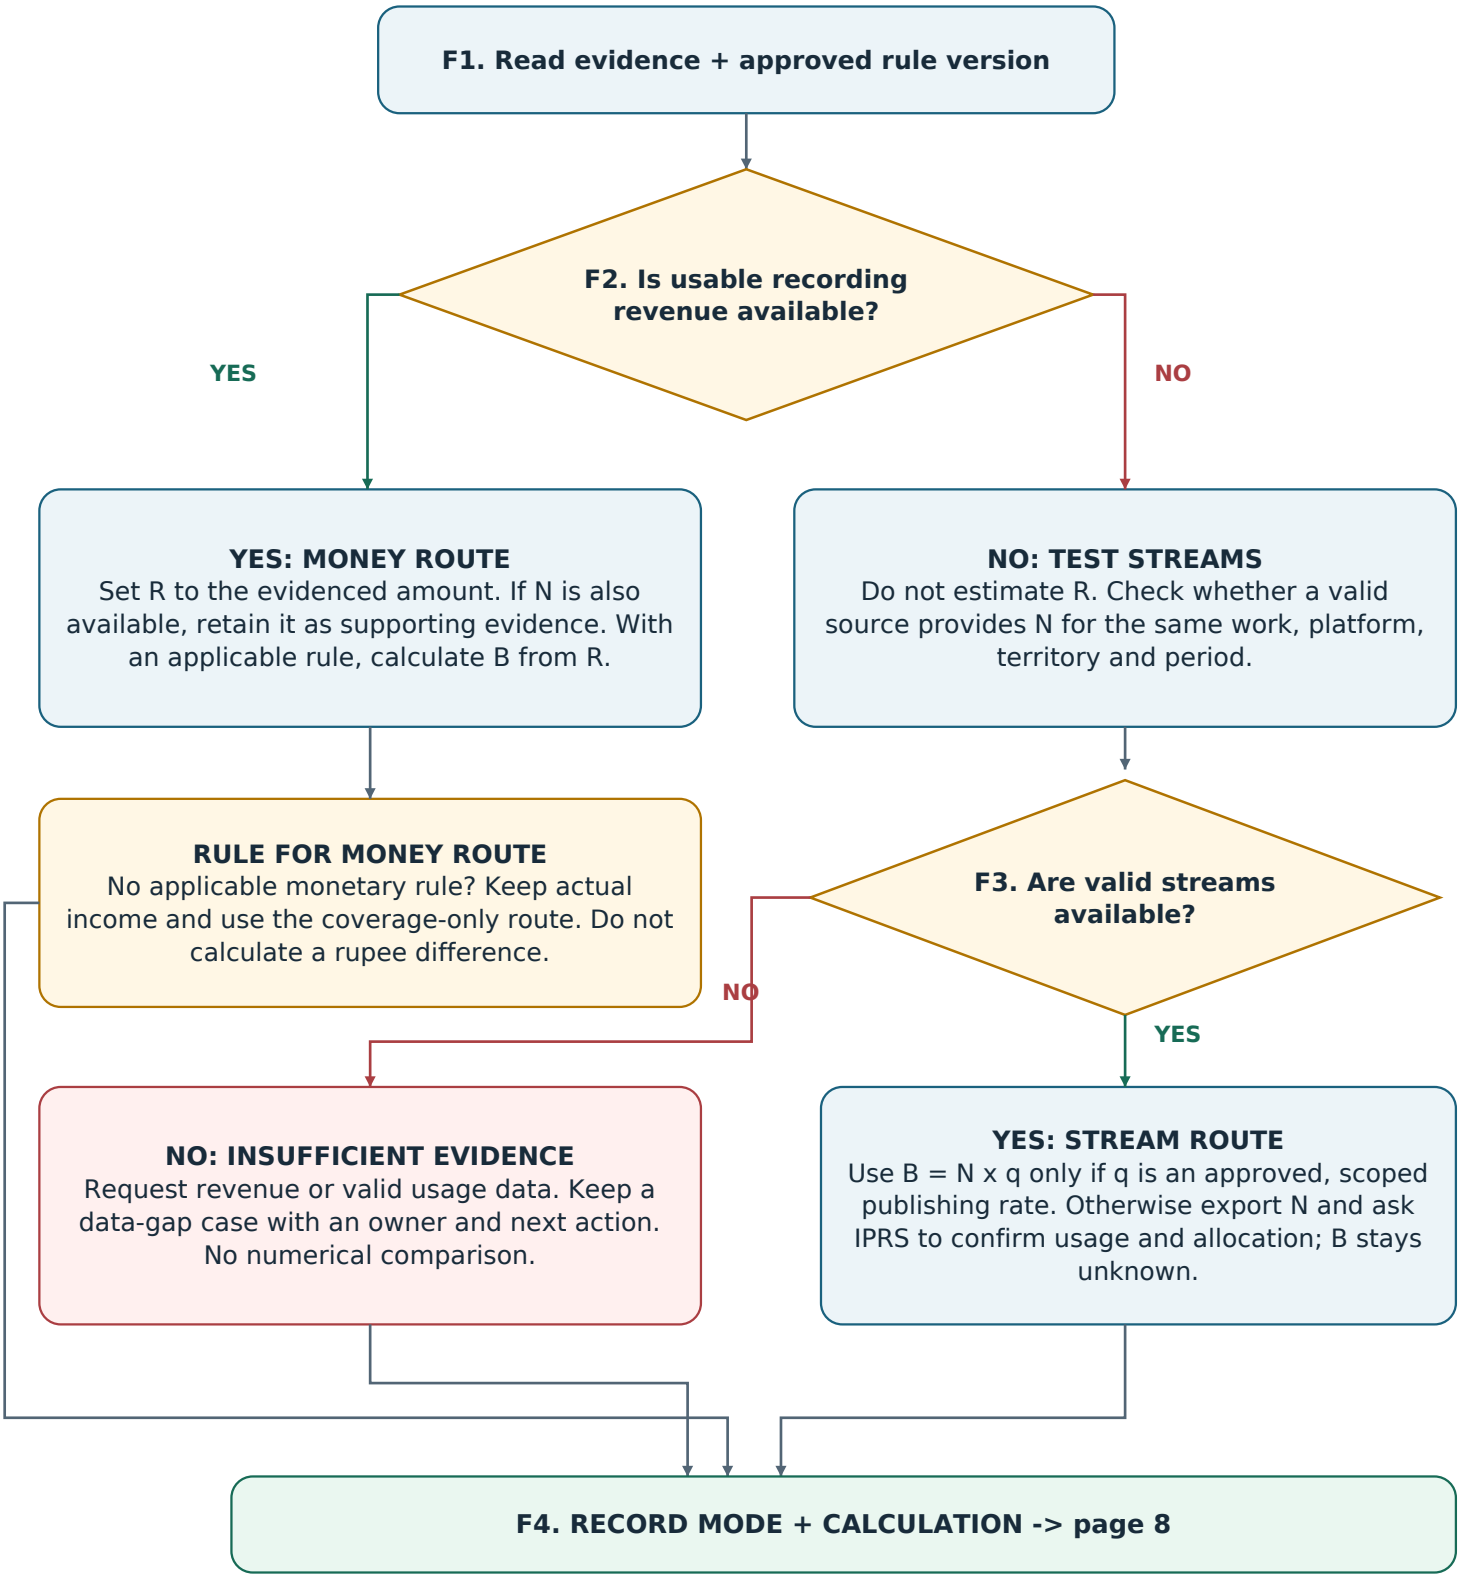

Required label. An internal 6% result is an "indicative benchmark" and its variance is a "difference for clarification". It is not automatically an amount due from IPRS. Formula choices are on page 12.

07 / MONEY, STREAMS OR BOTH

Choose the calculation route

R = eligible recording amount; N = valid stream count; B = publishing comparison amount. Missing values remain blank with a reason.

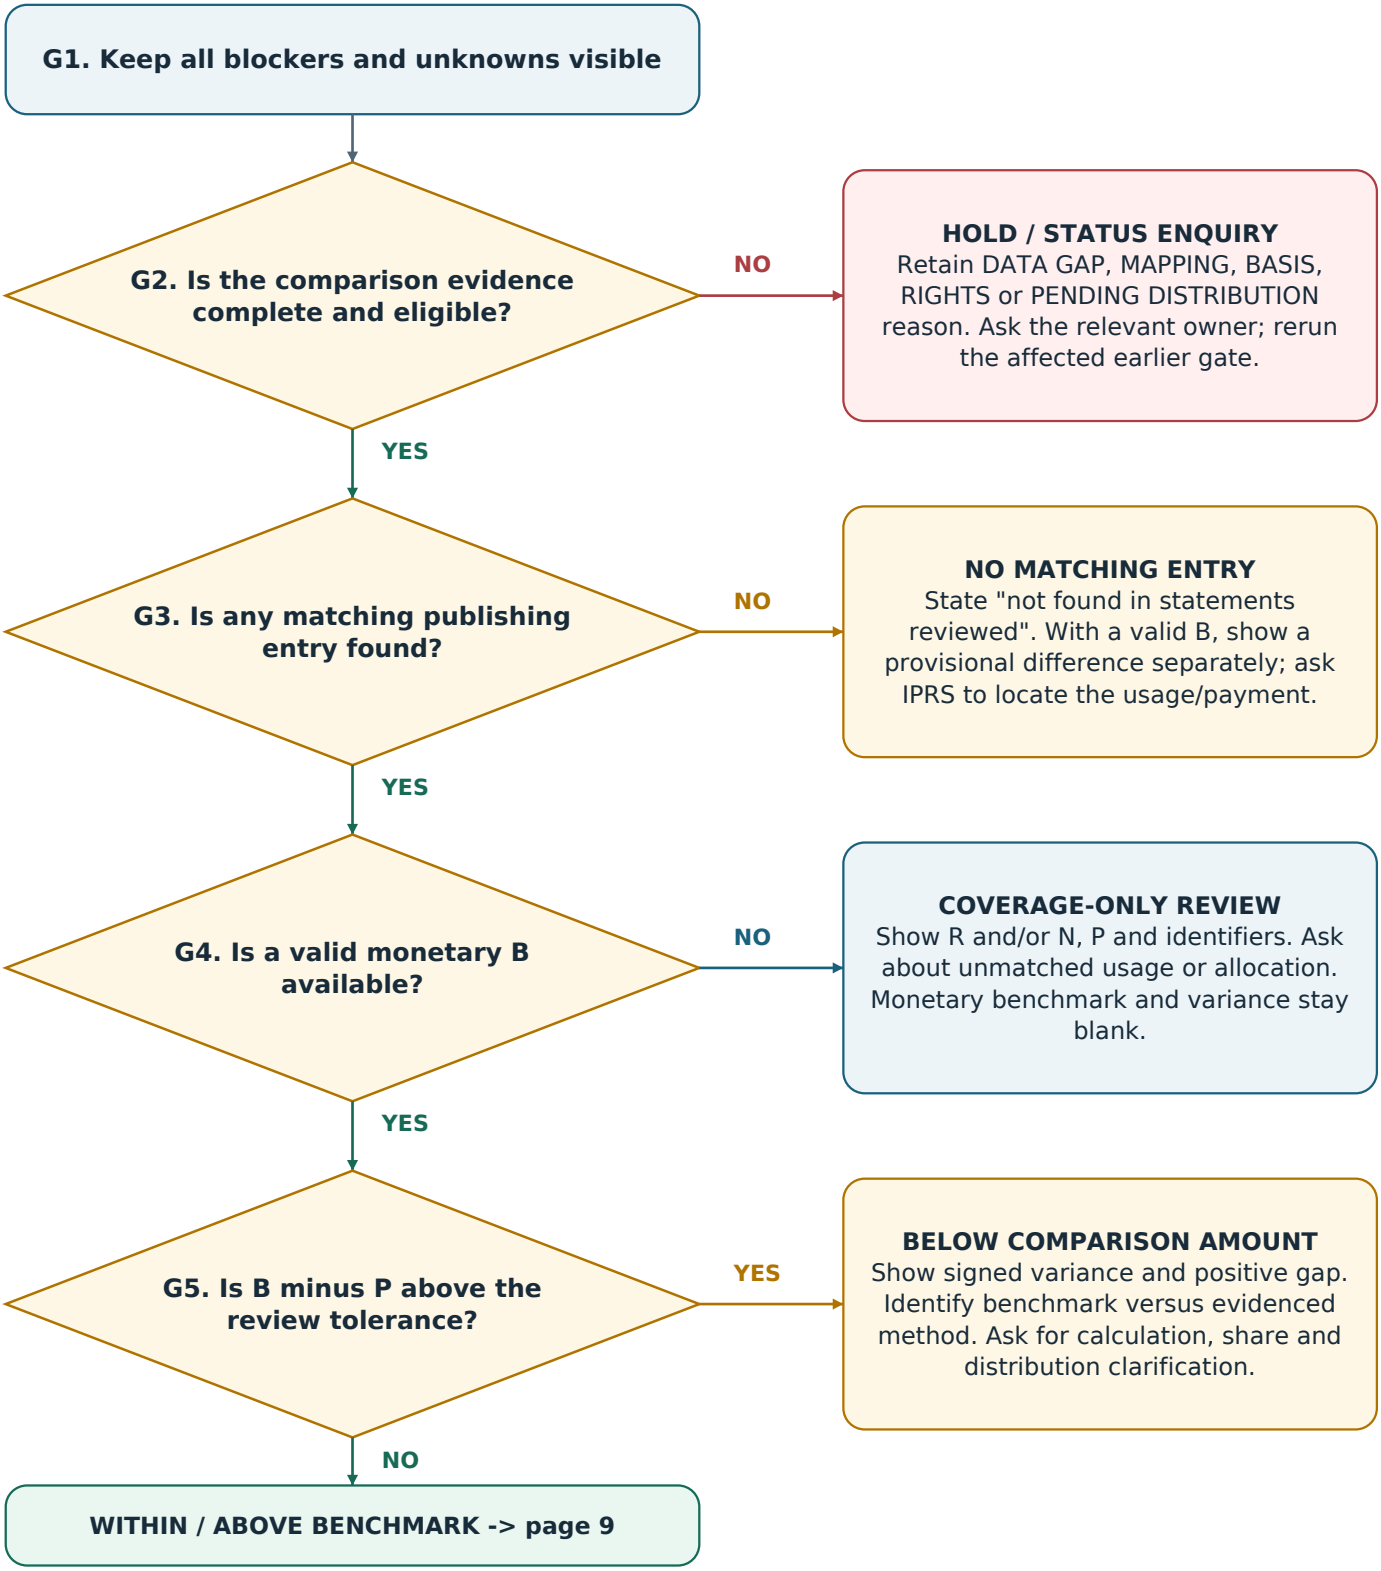

Both inputs. Money is the primary benchmark when eligible; streams are a cross-check. If two estimates are calculated, display them separately and never add them. A stream count alone does not establish a rupee rate.

08 / OUTCOME RULES

Turn differences into precise questions

P = comparable publishing amount in supplied statements. Match at the composition/group level so P is not repeated for each recording.

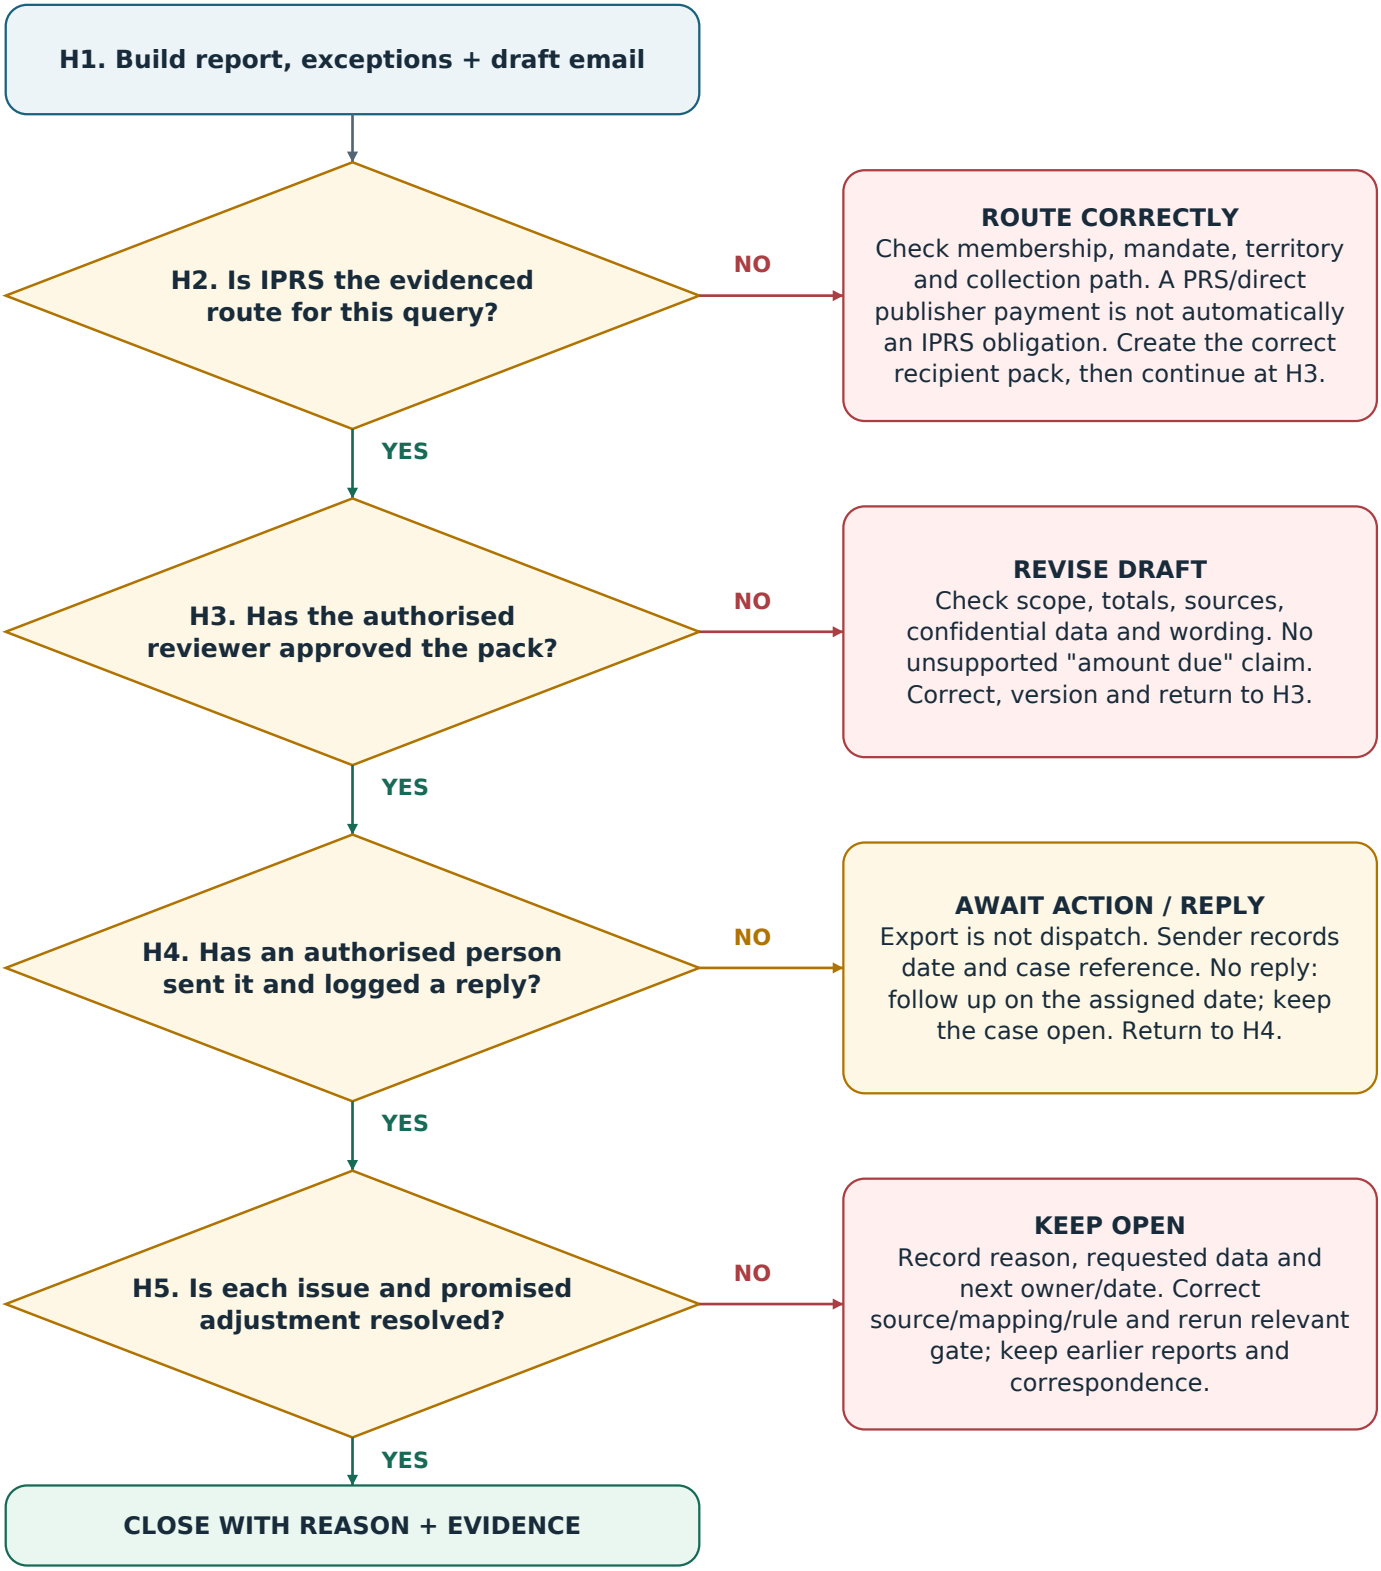

All outcomes -> page 9. Within tolerance: no ratio flag, not proof of full payment. Above benchmark: review credits/basis if material. Missing entry, explicit zero, pending cycle and missing statement are distinct statuses.

09 / OUTPUT + RESOLUTION

Generate the pack, then track the reply

Proposed roles: Swatantra - build/import; Devi or designated rights reviewer - mapping/share; accounts - money checks; Sherley/authorised approver - final release.

Resolution states. Close explained/no-adjustment or completed corrections. Promised adjustments remain open. Track payment pending, credited and received separately; link later statements/receipts before recording a recovery.

10 / THE REQUIRED OUTPUT

What the report must contain

Future software deliverables: an Excel evidence pack, a short client summary and an editable IPRS email. This document defines those outputs; no live SVF amounts have been calculated.

Section / sheet	Required content
1. Client summary	Publisher/label name; publishing beneficiary/member ID; mandate; platforms, territories and usage dates; cutoff; input and eligible work counts; coverage limits; separate recording and publishing totals.
2. Mapped comparison	One row per comparable group: case ID; work title/film; composer/lyricist; internal work ID; IPRS work number / PRS tune code / ISWC; linked ISRCs and typed asset IDs; mapping status/version.
3. Financial + usage detail	Recording amount R, currency and gross/net/share basis; stream count N and definition; publishing P and statement/payment status; underlying platform; usage period; distribution ID; supported adjustments and FX.
4. Calculation + question	Rule ID/version; 6% benchmark or evidenced method; beneficiary share treatment; comparison amount B; signed variance; positive gap; confidence/limitations; query reason; exact clarification requested.
5. Exceptions + review	Unknown and unmatched items; registration/share issues; duplicates pending review; missing statements; pending distributions; owner, deadline, next action and resolution evidence. No silent exclusions.
6. Source + reconciliation	Original file, sheet/page and row links for every figure; file/version IDs; source totals; validation results; confirmed duplicate exclusions; rule and decision history; export version.
7. IPRS enquiry schedule	Only relevant, reviewed cases for the named client/beneficiary. Include evidence references and reply fields: IPRS status, amount/period, reason, correction requested and expected distribution.

Aggregation control: sum recording earnings across the mapped masters in a group once; include the matching composition-level publishing amount once. Do not repeat the same publishing amount against every ISRC.

Summary control: report each currency and right separately. Add only comparable groups. Show positive gaps and amounts above benchmark separately; one work must not conceal another work's gap.

11 / FINAL OUTPUT TEMPLATE

The email generated for IPRS

Template only. Populate fields from the reviewed report. Do not claim checks passed unless the relevant gates are approved.

Subject: Request for royalty reconciliation and clarification | [Publisher/member] | [Platform] | [Usage period]

Dear IPRS Team,

On behalf of **[publisher/member name and membership number]**, MRM has reviewed the attached recording revenue/usage reports against the publishing royalty statements available to us for **[platform, territory, usage period]**, with a statement cutoff of **[date]**.

We reconciled the supplied statements to their source totals, reviewed duplicates and linked the recordings to the relevant musical works using the identifiers and supporting metadata listed in the annexure. We have kept recording and publishing income separate and identified the beneficiary/share and comparison basis for each queried line.

For the eligible rows marked **MRM benchmark**, we used **6% of [precisely defined recording revenue base]** as an internal screening reference, with the share treatment disclosed. We request confirmation of its relevance to these cases; we have not treated it as an established IPRS tariff or confirmed amount payable. [Replace this paragraph where an evidenced method applies.]

The annexure identifies **[number]** works requiring clarification, including **[no matching entry / below benchmark / usage-only / registration or distribution-status queries]**. Where only streams are available and no applicable monetary rate is evidenced, we have reported usage without estimating an amount due.

Please confirm for each flagged work:
1. Whether the recording-to-work mapping, registration and beneficiary share are correct.
2. Whether the relevant platform usage and revenue have been received and allocated.
3. The applicable calculation basis, deductions, thresholds and distribution period.
4. Any reason for a missing or different allocation, and the documents or corrective action required.
5. Where an adjustment is warranted, the expected distribution/reference.

Please return your response against the case IDs in the attached schedule so we can update the publisher and close each item accurately.

Regards,
Sherley Singh
Music Rights Management (MRM) India

12 / CALCULATION CONTRACT

Formulas and example outcomes

Illustrative amounts only. Use the selected beneficiary, currency and scope consistently. A benchmark variance remains a question for review.

Mode	Calculation and conditions
Money -> beneficiary benchmark	B = R x 0.06, only where 6% is expressly defined for that beneficiary and that revenue base. If the approved rule is for 100% of a work, B = R x k x s, where s is the evidenced controlled publishing share. Do not apply s twice.
Streams -> monetary estimate	B = N x q only with an approved publishing rate q for the same platform, territory, period, use and beneficiary basis. If q is a recording rate, the separately evidenced recording-to-publishing rule is also required. Default q is blank.
Streams -> coverage enquiry	No applicable rate: show N, identifiers and any publishing entry found. B and monetary variance are blank. Ask IPRS to verify usage, allocation and distribution status.
Variance and review	V = B - P; positive gap = max(0, V). Flag when V exceeds the configured monetary tolerance. Retain negative V separately. No matching P row is not an observed zero; any B - 0 illustration must be tagged provisional.

EXAMPLES FOR SWATANTRA'S ACCEPTANCE CHECK

Example	Expected software output
₹1,000 recording; ₹40 publishing	Eligible beneficiary-specific 6% benchmark: B = ₹60; V = ₹20. Status: below MRM benchmark; seek clarification. This does not establish a ₹20 debt.
₹50 recording; ₹1 publishing	On the same defined basis: B = ₹3; V = ₹2. Report both original amounts and the comparison assumption.
10,000 streams; revenue unknown	With no approved q: show 10,000 streams; monetary benchmark blank. Do not use a universal per-stream rate.
Two masters; one work	R1 = ₹400 and R2 = ₹600. One matched P = ₹40. Group R = ₹1,000 and P = ₹40 once; never count P twice.
Statement / cycle missing	Publishing amount is unknown or pending. Keep a status query. Do not classify an unpaid royalty or add this to confirmed monetary differences.

13 / APPROVAL + IMPLEMENTATION BRIEF

What is being approved now

Approve the process and business rules before requesting the Claude/software implementation brief. The SVF architecture is the starting specification, not independent proof of a tested build.

Approval item	Proposed decision
1. Scope	Publisher/label clients with verified publishing authority; reusable across clients. Separate work, recording, income and usage records.
2. Comparison rule	6% enabled only as an explicit MRM benchmark on a defined basis. Record any society/contract-supported replacement method, share treatment and dates.
3. Unknowns + outputs	Accept money, streams or both. Keep unknown, explicit zero, absent entry and pending distribution distinct. Output the client report, exceptions and IPRS enquiry pack.
4. Release + ownership	Swatantra implements; designated rights/accounts reviewers validate; Sherley or authorised approver releases the report. Sending is a separate authorised action.

REQUIRED DEMONSTRATION BEFORE SOFTWARE ACCEPTANCE

Re-upload does not inflate totals; corrected statements supersede correctly; all money reconciles; fuzzy candidates require human decisions; two masters do not duplicate publishing income; mixed rights stay separate; streams-only creates no invented amount; wrong period/share/currency is held; missing data is not zero; rule changes create new versions; report figures trace to source rows; resolving a case retains its history.

SOURCE BASIS AND LIMITS

[S1] Spotify - Understanding Spotify royalties
Recording and publishing are different rights; Spotify does not use a fixed artist royalty per stream.

[S2] IPRS - All About Licensing
IPRS describes musical/literary rights separately from sound-recording rights.

[S3] IPRS - INTR tariff, effective 1 April 2025
Published licensing bases vary by service. A platform tariff does not itself prove a fixed percentage payable on one label's statement.

[S4] IPRS - Distribution Rules & Methods, 2026 AGM annexure
Consult the applicable rules and confirmations for usage, allocations and timing. Do not assume immediate distribution from a matching DSP receipt.

Also used: supplied SVF Entertainment Royalty Intelligence Platform Architecture Summary (September 2026), pages 2-8; Sherley's instructions and examples. Primary sources checked 01 October 2026. Workflow controls are proposed MRM design requirements.
